1. Brand Overview

Retail-Flow is a strategic consulting firm that bridges the gap between physical retail and advanced data analytics.

- **Our Mission:** We help physical retailers understand what really happens inside their stores.

- **Our Value Proposition:** Turning in-store customer movement into actionable insights by combining sensor data with sales transactions.

2. Color Palette

Our color scheme is high-contrast, combining deep, authoritative tones with soft, human-centric highlights.

Primary Colors (Brand Identity)

Used for logos, primary backgrounds, and main headlines.

- **Deep Burgundy**
  - **HEX:** #85222E
  - **Usage:** Main headers, strong emphasis, heavy backgrounds.
- **Soft Nude / Pale Pink**
  - **HEX:** #F6C4B5
  - **Usage:** Secondary backgrounds, profile cutouts, softening heavy data.

Secondary Colors (Technical & UI)

Used for data visualization, "Laws & Restrictions" contexts, and text.

- **Warm Charcoal / Dark Eggplant**
  - **HEX:** #261916
  - **Usage:** Dark mode backgrounds, technical diagrams, footer areas.
- **Off-White / Rose Tint**
  - **HEX:** #FEF5F4
  - **Usage:** "White" space backgrounds (avoid pure white #FFFFFF where possible).

Accent Color (Highlights)

Used sparingly to guide the eye or represent financial metrics.

- **Mustard Gold**
  - **HEX:** #C39E56
  - **Usage:** Icons, financial data points ($/€), restriction warnings.

3. Typography

Our typography reflects our dual nature: bold impact (Retail) and clean precision (Data).

Primary Typeface (Headlines)

- **Style:** Sans-Serif Condensed, Extra Bold.
- **Case:** ALL CAPS.
- **Usage:** Slide titles, cover pages, big impact statements.
- **Recommended Font:** *Bebas Neue* or *Oswald*.

Secondary Typeface (Body & Data)

- **Style:** Geometric Sans-Serif.
- **Weights:** Light, Regular, Bold.
- **Usage:** Paragraph text, lists, code snippets, database schemas.
- **Recommended Font:** *Montserrat* or *Roboto*.

4. Imagery & Photography Style

A. Team & Human Element

- **The "Duotono" Cutout:** Portraits should be removed from their backgrounds.
- **Treatment:** Apply a red/burgundy tint or place the subject against a solid brand color background (Deep Burgundy or Soft Pink).

- **Framing:** Use thin, rectangular borders around subjects to frame them as "data points" within the flow.

B. Technical & Contextual

- **The "Computer Vision" Look:** Use real-world retail footage overlaid with technical UI elements.
- **Elements:** Bounding boxes around people, tracking lines, heatmaps, or time-stamps (e.g., "REC 01:06:44:06").

- **Vibe:** Observational, analytical, "under the hood" of the store.

5. Graphic Elements & Icons

- **Iconography:** Use "Outline" (stroke-based) icons rather than filled shapes.

- **Coloring:** Icons should be rendered in **Mustard Gold** (#C39E56) when on dark backgrounds for maximum visibility.

- **Data Viz:**
  - **Tables:** Clean lines, avoiding heavy fills. Use the primary Red for header rows.
  - **Diagrams:** Entity Relationship Diagrams (ERD) should use sharp corners and clear connectors, utilizing the Dark Charcoal palette.

6. Layout Principles

- **Split Screen:** Often divide slides vertically—one side for bold typography/color, the other for detailed text/data.
- **Hierarchy:** Title size should be significantly larger than body text (at least 3x scale) to create drama.
- **Negative Space:** Do not overcrowd slides. If the data is complex (like the Data Structure diagrams), give it a dedicated full slide.

7. Application Checklist (Do's & Don'ts)

✅ DO	❌ DON'T
DO use the Off-White (#FEF5F4) instead of pure white for document backgrounds to reduce eye strain.	**DON'T** use gradients or drop shadows. Keep colors flat and solid.
DO use All Caps for headers.	**DON'T** use Serif fonts (like Times New Roman) unless strictly required for legal fine print.
DO highlight financial constraints or money-related topics in Mustard Gold.	**DON'T** use green or blue for "success" metrics; stick to the brand palette (Red/Pink/Gold).
DO anonymize customer data in visual examples (blur faces in standard photos).	**DON'T** use stock photos of "happy shoppers" without applying the technical/brand overlay.
