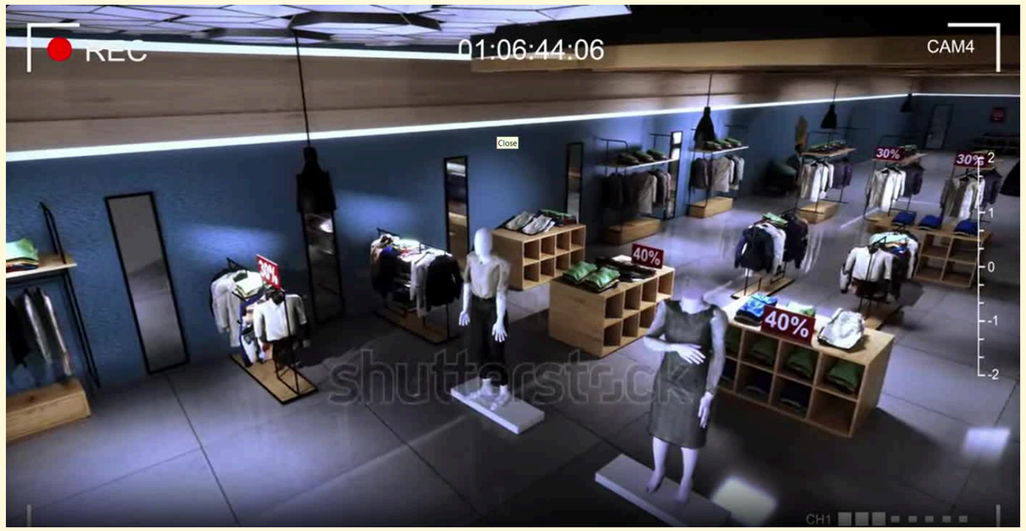
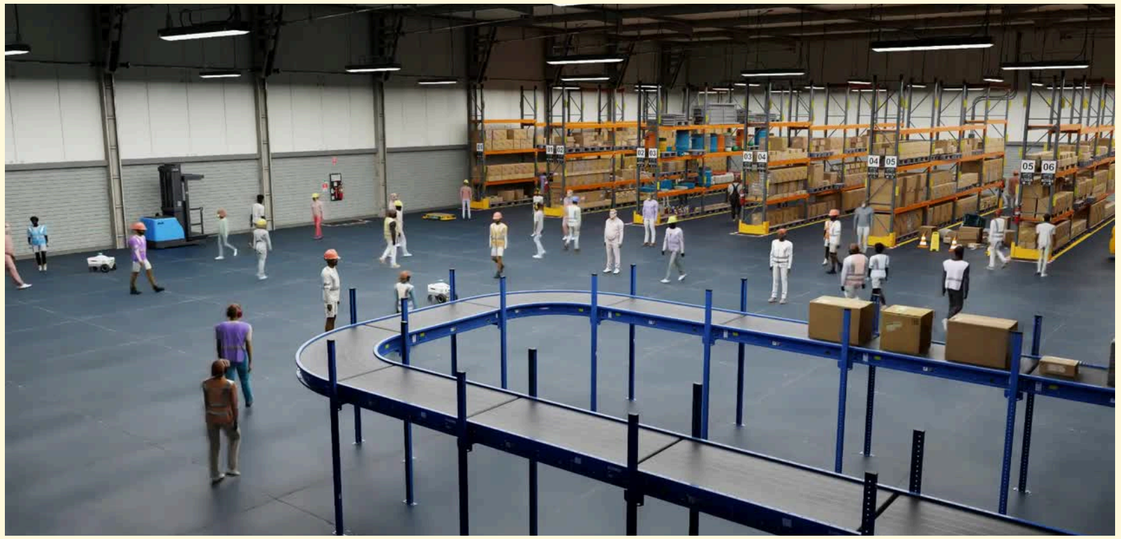
DATA SOURCES



DATA SOURCES



BUSINESS QUESTIONS

- Most common route customers take? Do they go straight to the "Sales" section or browse the "New Arrivals" first?
- Average wait time at the checkout or fitting rooms? At what point do customers "abandon" their purchase due to long lines?
- How long does a customer stay in the store?
- If we spent X€ renovating the "Menswear" section, did the traffic-to-sales ratio actually improve?
- How many customers entered the store, stayed for more than 10 minutes, but left without buying anything?
- Are there areas in the store that no one visits?

DEPARTMENTS

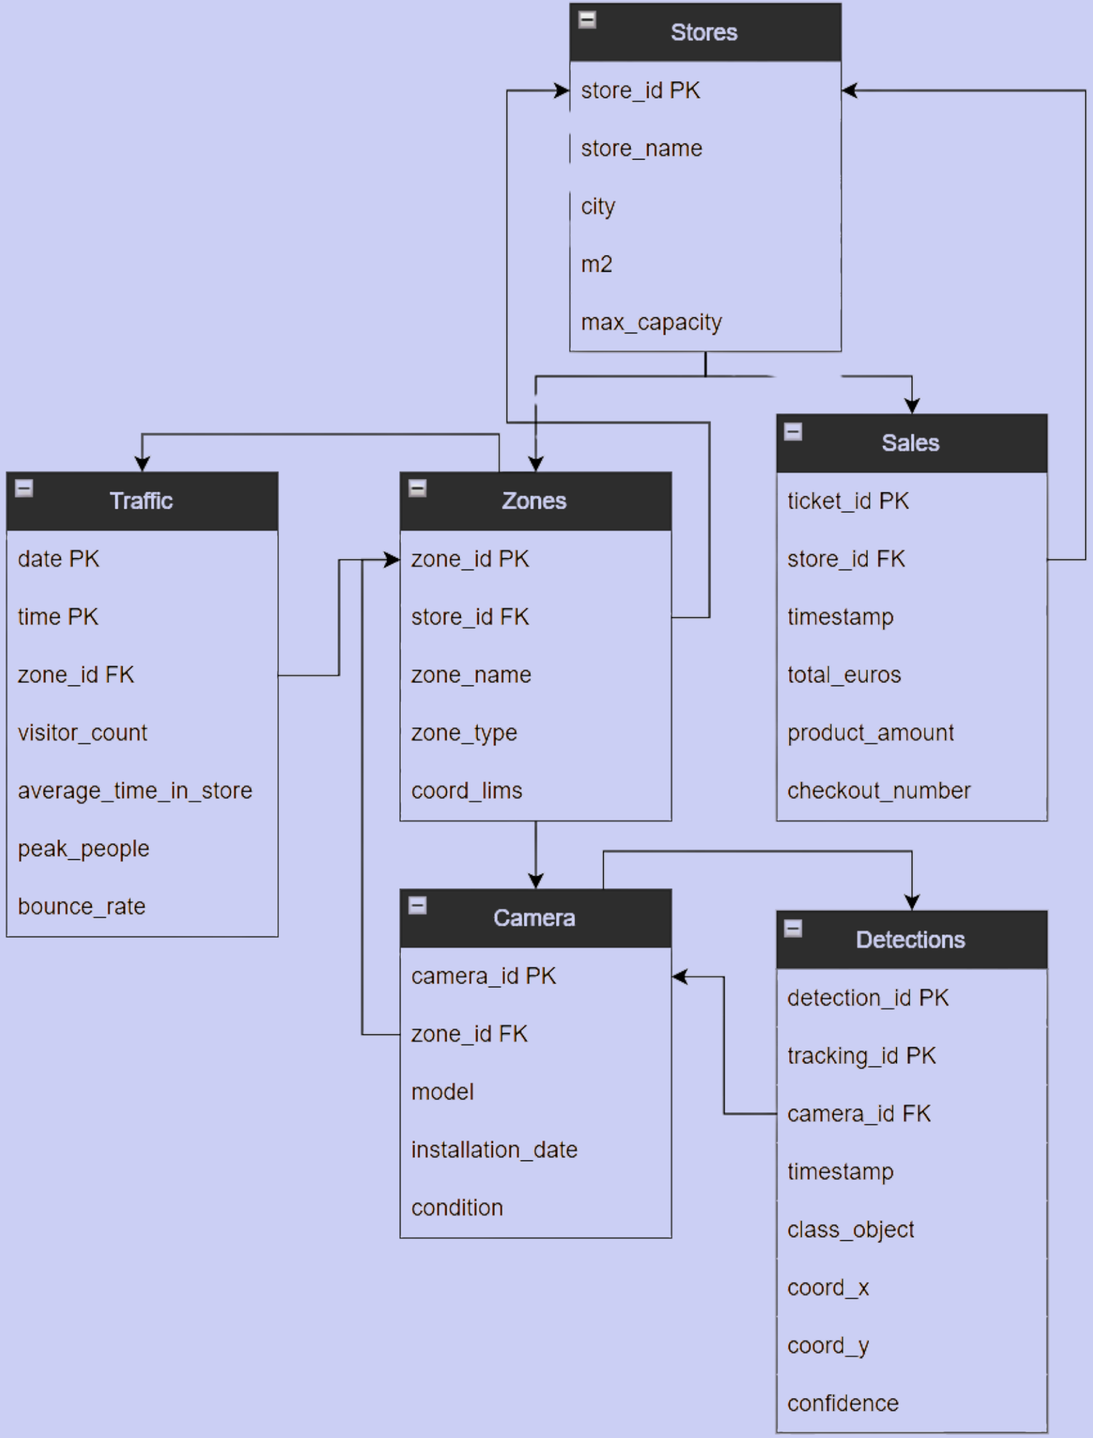
Department	Project interest
Store and operations	Optimize the staff and reduce wait times in checkouts and fitting rooms.
Marketing	Measure how the window display and the promotions are doing on the stores.
Visual merchandising	Verify if the store layout guides the clients towards the path to purchase.
Human resources	Plan the workshifts based on the store affluence.
Legal and compliance	Ensure hashing and anonymization are applied.

DATA BASES

SQL

We need to relate the sales movements, and the physical store structure (areas).

- Data extracted from the videos taken by the cameras.
- We do not save the videos because they´re compromised by some laws.



THANK YOU
